

CLINICAL DIAGNOSIS & TREATMENT OF TMJ & FACIAL PAIN with or without HEADACHES!

DR. BRENDAN STACK
ORTHODONTIST and TMJD EXPERT
Washington, DC

TORONTO, ONTARIO, CANADA
Friday, October 15, 2010

DR. STACK is a University trained Orthodontist who has been treating TMJ/TMD & Craniofacial Pain for 45 YEARS.

There is likely NO ONE still in clinical practice who has seen as many clinical cases as DR. STACK.

DR. STACK is an experienced International lecturer with a VAST repository of TMJ knowledge and the ability to communicate it well to others.

8:00 a.m. — 5:00 p.m.

Clinical Diagnosis & Treatment of TMJ & Facial Pain with or without headaches

**LEARN WHAT THERE WASN'T
TIME TO LEARN IN DENTAL SCHOOL!**

- Have you been in practice for five or more years?
- Cases starting to relapse?
- Occlusions starting to change adversely?
- Patient's complaining and asking for their money back?
- Don't know what to do?
- Practice isn't fun anymore?

THIS ONE DAY PROGRAM WILL ADDRESS THESE QUESTIONS

ONE DAY LECTURE OUTLINE (as time permits and questioning allows):

- **TMJ Anatomy and Function** illustrated by sagittal and coronal wet and dry specimens
- What do TMJ pathologies (perforations, tears, adhesion, etc.) look like? **Why you can't fix them.**
- **Joint "clicking"** What it is, how it works, what to do about it and **why you must do something about it!**
- **Range of Motion.** The quickest & easiest way to tell if your patient has normal TMJ's or if there is a problem.
- Clinical signs of early, middle & late opening, unilateral and bilateral clicking. **What to do about them.**
- Acute and chronic unilateral locked TMJ's. **How to tell the difference between the two.**
- Deviation vs. Deflection in mouth opening. **Why is it important?**
- Treating patients "**off the disc**". **Why it is not a good idea!**
- Three, **NOT TWO** types of Internal Derangements. **This is VERY important!**
- Chronic bilateral locked TMJ's. Degenerative joint disease. Illustrations from acute to "**end stage**" disease.
- Clinical signs of chronic malocclusions. **How they differ from acute malocclusions.**
- Osteoarthritic degeneration and remodeling of skulls in children. **Yes, even children have TMJD & Degenerative Joint Disease.**
- Types of **SPLINTS**. You can treat most patients successfully with just **two types of splints**. Indications and contradictions of anterior repositioning devices. **They really do work when used appropriately!**
- The "**Functional Matrix Theory of Growth**".
- Treatment of a patient with **bilateral late opening clicks**.
- Indications and contraindications of mandibular pivot appliances. **These also work when used appropriately!**
- Treatment of a patient with a **bilateral closed lock internal derangement**.
- Treatment of a patient with **severe bilateral degenerative arthritis**.
- **Evaluation of FOUR FAILED treatment cases** (multiple appliances and doctors).
- All chronic TMJ patients have **facial distortions which must be eliminated for you to be successful!**
- All chronic TMJ patients have an **underlying distorted craniofacial bony matrix causing the facial distortion.**
- **There is no sense treating/restoring a TMJD patient with crowns/bridges/orthodontics if you can't FIRST eliminate and reverse the compensating craniofacial distortions—the case will relapse!**
- Treatment of facial distortions using the **Alternative Lightwire Force appliance (ALF)**.
- **You MUST know ALL of this to treat cases successfully with long-term stability.**
